## PLASTIC SURGERY

**RAYMOND JEAN, MD**

Main Line Plastic Surgery

**Q What are some of the minimally invasive options you offer?**

We now have laser body sculpting, laser neck lifts, injectable fillers, Botox, blood PRP facials and facelifts, and much more. These are performed in my office and do not require general anesthesia. My patients love these procedures because they have very short recovery times and dramatic, affordable results.

**Q What should someone look for when choosing a plastic surgeon?**

Be knowledgeable and informed! First, make sure your doctor is a board-certified plastic surgeon, which means he or she has met very rigorous training requirements and specializes in your surgery. Second, you should look at online reviews – many people spend more time Googling restaurants than they do their doctors. Finally, you want someone you like and respect. At Main Line Plastic Surgery, we are always available to answer all your question before and after your procedure.

**Q What is the biggest misconception about plastic surgery?**

People associate plastic surgery with what they see on TV or in supermarket tabloids and that's not what they want to look like. But what they're seeing isn't typical. The best plastic surgery procedure is one that looks completely natural, which is my goal 100% of the time.

**Q How do women decide on what size is right when it comes to breast augmentation?**

We use the MENTOR® Volume Sizing System, which fits silicone molds over a woman's natural breasts to create a more realistic preview of her new size. Our patients can wear these molds under their clothes, a bathing suit or workout wear to really see how they will look after their breast augmentation.

**Q What are the most common procedures you perform?**

I am an expert in breast and body surgeries and well as minimally invasive face and neck procedures. My most common treatments are breast augmentation, breast lifts, and tummy tucks. I also perform many in-office, minimally invasive procedures, including laser face and neck lifts, and laser liposuction with SmartLipo.

**Q What trends are you seeing?**

I'm seeing more men interested in cosmetic surgery and minimally invasive procedures. They often want to rejuvenate their faces and necks. I'm also seeing more younger women requesting 'mommy makeovers' – a post-pregnancy rejuvenation that can include breast augmentation, a tummy tuck, and/or liposuction.
